

On-Demand Development Services

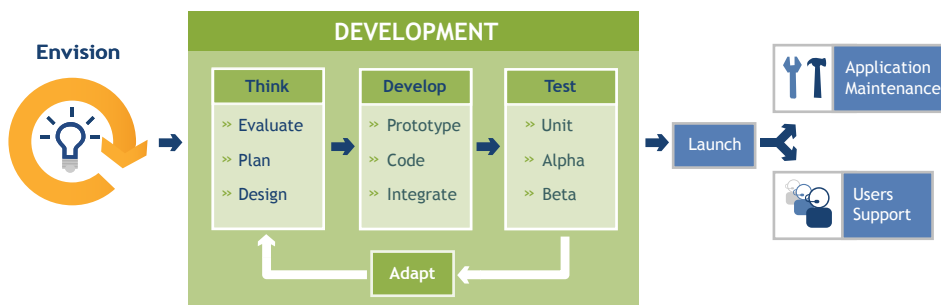

Scio's development services are, first and foremost, guided by a strategic vision for your business and a rigorous approach to project management. Because when it comes to ensuring a new product's success, we're as conservative and careful as they come.

But, we're also passionate about innovation. A new approach, a better process or improved technology can take your product from everyday to exceptional. It can be the difference between a software product that meets your requirements or exceeds your expectations, that gets you up to par or differentiates you from the competition.

Product Development

Adaptive Software Development Process

Consistent,
passionately innovate
development

So why work with Scio on your next development project?

- » **A Proven Process.** Scio uses a time-tested set of development processes to address your technology needs. Rigorous project management is an integral part of our culture. Delivering projects on task, on time and in budget aren't goals to be reached. They're an assumption clients can take for granted.
- » **Accountability.** The same team that helped develop the product plan will be responsible for your software development and ultimately its maintenance. One point of contact means one bottom-line responsible party for your product's entire lifecycle.
- » **Cost Efficiencies.** Your development costs will be cut by as much as 30 to 50 percent because of the beneficial nearshore location of our Development Center in Morelia, Mexico. And, because we focus on maintaining an efficiently sized and balanced team, you receive these benefits without incurring the often overwhelming costs (and experience) of working with one of the big corporate players.
- » **Advanced Technology.** Our focus is developing leading-edge products, so we take staying abreast of emerging technologies seriously. We regularly evaluate new tools and trends so we can apply the best and most advantageous of up-and-coming and proven technologies to your product.

Scio Nearshore Agility

At Scio, we have developed on, Agile Development Practice to provide our clients with faster time-to-market along with the competitive advantage that nearshore outsourcing offers.

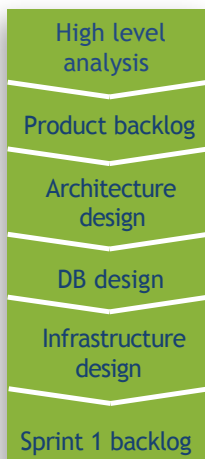

Our experienced development teams use a mix of Agile-based principles and Scrum practices to provide a flexible delivery model that scales to meet the needs of projects from large to small. Our Development Center in Morelia, Mexico is staffed with teams of senior analysts, developers, and test engineers who are skilled in Agile methods and use them lower development times, improve ROI and deliver quality.

Our , Agile Development Practice along with our product development experience, provide our clients feature-led products that provide value to their customers and competitive leverage from day one.
